

BECOME A TRIBUTARY PROCESSOR

Manage Subscriptions Your Way

Businesses can become Tributary processors, taking full control of user subscriptions on Solana.

Handle onboarding, trigger payments when due, and customize responses to successes/failures - all while earning fees.

Key Benefits

- Onboard users seamlessly into subscriptions.
- Manage transaction histories and branded overviews.
- Hook into payment flows for tailored experiences.
- Get development support from Tributary experts.

Non-custodial, automated, and transparent.

THE OPPORTUNITY

The Monetization Struggle on Solana

Problem

Indie Solana projects struggle with monetization:

- Manual Payments: Tedious, error-prone processes
- High Fees: Drain profits and hinder growth
- On-Chain Complexity: Destroys SaaS potential

Costs Comparison

- Web2 Subscriptions: Lose 2-3% to fees
- Solana Alternatives: Add fixed SOL costs + UX friction → deters users

Market

Hundreds of SaaS, DePIN, SocialFi projects on Solana need reliable recurring revenue to scale sustainably.

OPPORTUNITY

Enable low-friction USDC subscriptions via one-time delegation

OUR SOLUTION

Delegation-Driven Automation

Tributary enables automated USDC subscriptions via one-time token delegation – users approve once, payments follow seamlessly.

Key Features

- Non-custodial control
- Sub-\$0.01 transaction fees
- Instant settlements

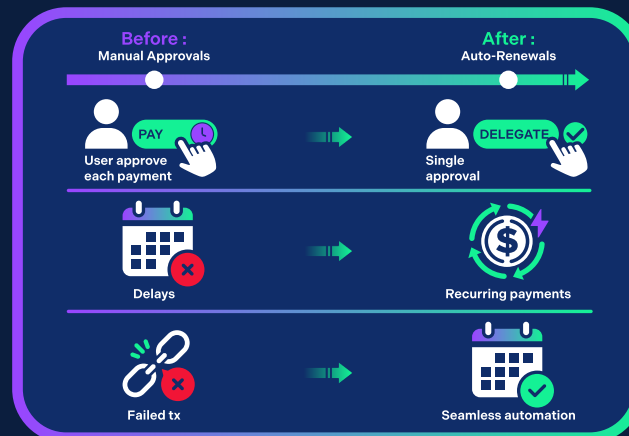

Benefits

- Web2 UX for customers
- Predictable revenue for providers
- Built-in analytics

Unique Edge

- Superior UX: One-time delegation vs. repetitive confirmations.
- Developer ecosystem: Complete SDKs, React components, and docs for easy integration.
- Protocol design: Enables unlimited businesses to build on top, creating network effects

DEVELOPER OVERVIEW

Easy Integration

Stack

- Rust Contracts
- TypeScript SDK
- React Hooks

Build & Earn

- Hack the core or layer on top
- Custom fee splits for flexible revenue

Integrate Easily

- Simple API: Policies, Processor, Payments
- Open-source GitHub repo

Dive In

- Reference Integration: contribute.so
- Mainnet-ready now!

contribute.so

- Patreon-Style Donations built on Tributary
- A reference processor using Tributary for seamless monthly donations.

How it Works :

- OAuth2 Onboarding: Users sign up via Socials for instant access.
- Custom Profiles: Creators share a simple link to their contribute.so page.
- Automated Donations: Supporters set up recurring donations with one-click of a button on the profile.

Key Features Enabled by Tributary:

- Non-custodial subscriptions
- Web2 UX with Web3 transparency
- Custom fee splits for processors
- Easy API integration for policies and payments

Build Your Own:

Use Tributary SDK to create similar flows. Open-source and developer-friendly.
